

# Chi Alpha: Christian Fellowship Full-stack Mobile Application

*Sprint 2 Report*

02/02/23 – 03/02/23

**Chi Alpha WSU**

**Web Ready**

Vincent Yen, Justin Lee

## What's New

- Completed majority of administrative website for posting new announcements and events.
- Completed majority of the last features for events page on the mobile app

## Work Summary

This sprint was meant to be used to finalize the MVP so that the next sprint can be used to deploy the application components. Unfortunately, the MVP is not yet complete, but enough progress has been made so that it shouldn't take more than a week or so to finish the remaining components.

## Unfinished Work

The last remaining component for the admin website is to work the authorization wrapper into the routing so that the admin pages can only be viewed if the user is logged in with correct authentication and routed to login if not. The last feature of the mobile app requires that the response form of the events page to be completed and able to submit POST to the server API.

## Incomplete Issues/User stories

All current Issues are being tracked at the following url:

<https://github.com/WSUCptSCapstone-Fall2022Spring2023/cacf-fullstackapp/issues>

These issues were attempted to be completed in larger chunks so there were no completed issues for this sprint. For the next sprint there may not be a way to establish a viewable issue since it involves deploying the application.

## Code Files for Review

The following code files are being actively developed and are available for review for quality:

Admin Website

<https://github.com/WSUCptSCapstone-Fall2022Spring2023/cacf-fullstackapp/tree/36-admin-site>

Events Page

<https://github.com/WSUCptSCapstone-Fall2022Spring2023/cacf-fullstackapp/tree/34-event-page>

### Retrospective Summary

Reflecting upon the errors of the previous sprints, we worked more diligently this sprint to make up for lost time in the hopes that we would be able to establish a firmly created MVP. We will continue to work quickly to finish the MVP so that the application will be deployed before the next sprint.

### Here's What We'd Like to Improve

- Improve team cohesion/communication so that the team can be on the same track.
- Testing

### Changes that are planned to be implemented in next sprint

Completion of MVP and begin testing and deployment
